CONNECTRAC

ENHANCED CONNECTIVITY

Connectrac's innovative floor-mounted cabling systems now feature high performance telecom/AV connectors from Hubbell. Designed specifically for the wide array of connectors available in Hubbell's iStation line, Connectrac I-Series receptacles and the new Connectrac V-Series tower will give you virtually any connectivity options you need. The front loading components from Hubbell offer best in class performance and are designed to exceed current standards for performance. When mated with the Connectrac wireway systems, telecom/AV/power connectivity is easily achieved—AND easily changed when the need arises. The completely modular iStation components can be mixed-and-matched to achieve virtually any combination. Whether your application is in a conference room, training room, classroom or open office space, Connectrac and Hubbell iStation components help to make connectivity a snap.

I-SERIES CAPABILITIES

Connectrac's I-Series duplex receptacle systems offer simple solutions to big problems. At conference room tables, classroom lecterns or even private office desks, these solutions easily provide the necessary telecom/AV/power connectivity. They're economical and easily installed. Plus they offer flexibility in keeping up with current and future technology needs via Hubbell's high performance iStation components. These modular components snap into the Connectrac receptacle device and can easily be changed when the need arises. The Connectrac I-Series receptacle offers a generous 4-Unit opening to accept a virtually unlimited combination of devices—from VGA, USB and HDMI to CAT6 data jacks.

V-SERIES CAPABILITIES

Connectrac's V-Series towers provide unique, free-standing telecom/AV/power "nodes" that can be located in multiples along Connectrac wireways. Whether the application is a library, airport lounge or training room, they offer ample power receptacles and support generous quantities of Hubbell's high performance iStation components. These modular components snap into the Connectrac V-Series towers and can easily be changed when the need arises. The Connectrac V-Series towers each provide four 3-Unit openings to accept a virtually unlimited combination of devices—from VGA, USB and HDMI to CAT6 data jacks.
